GERMAN DELEGATION

COCOM DOC 4131  
Paris, September 7, 1960

COORDINATING COMMITTEE  
MEMORANDUM BY THE GERMAN DELEGATION  
ON THE DELIVERY OF 4 TWO-TONE-TELEGRAPH-TRANSMISSION  
TERMINAL STATIONS TO RUMANIA

The German Delegation have the honour to refer to their Memorandum Cocom Doc 3667 and present hereby a further request for the delivery of

- 4 two-tone-telegraph transmission-terminal stations of the type WT 12
- valued at 12.410,---%

to Rumania, the equipment is covered by item 1523.

The shipment contains 2 two-tone WT-terminal stations having each six channels without subscriber's connection relais and 2 two-tone-WT-terminal stations with six channels each with subscriber's connection units.

The equipment is destined to take over (together with similar equipment shipped according to document 3667 and document 3701) the communications from Vienna and Budapest at the Rumanian border for transfer to Bukarest. In Bukarest the communications will be transferred either to the Rumanian tele-type-network or transferred in transit to the Rumanian-Bulgarian border for further transfer to Sofia.

The choice of the one or the other way, i. e. Rumanian tele-type network or transit to Bulgaria, has no influence on the technique, the instalment, the place of instalment or the work of the equipment.

When requesting this further equipment, the Rumanian PT-administration has mentioned that not only the Rumanian tele-communication but the transit as well have increased considerably and that the equipment delivered in 1959 is no more sufficient.

The German Delegation would draw attention to the fact that contrary to the first request no supplementary equipment is needed for Hungary, since the Hungarian PT-administration has shown no

interest to purchase further equipment. The German producer as well as the German authorities suppose that the increase possibly needed in Hungary will be covered by delivery of Hungarian equipment, since the Hungarian plant Belojanis (formerly Standard) has developed the production of telegraphic systems and can provide them.

The German Delegation present the request as an ad-hoc case and hope that like in the case of the former request covering the same type of equipment no objections will be raised. They hope to receive the view of the Governments at an early opportunity.
